

11/16/09 UA H1N1 flu status update #9

We started to see a decrease in H1N1 flu illness occurring in students towards the end of the week of 11/9/09. In general, H1N1 flu illness in members of the UA community had been increasing each week over the prior 4-6 weeks in line with the increases in cases being seen in the general Tucson community over that same period of time.

As we have been seeing all along during this second wave of the H1N1 pandemic flu, the majority of people who become ill with H1N1 flu are still having a mild illness and are recovering generally within 7-10 days. It is estimated that the H1N1 flu will be responsible for over 80% of the flu cases during this flu season. So far, we have not identified any cases of seasonal flu – it has all been H1N1 flu.

Since vaccine supplies are still limited (see below for H1N1 vaccine availability*), flu prevention and illness management is still very important. Please continue to follow the guidelines that have been communicated throughout this pandemic flu outbreak:

Mind your hands and sneezes. Wash your hands frequently and for at least 20 seconds; keep your hands away from your eyes, nose and mouth; cover coughs and sneezes using a tissue or your sleeve (but not your bare hand). Teach these practices to everyone at home.

If you're sick, stay home. When you come to school/work sick, you're putting your classmates, instructors and/or co-workers' health at risk. Getting this virus will be especially serious for those considered "high risk" for complications - people who are pregnant and those who have diabetes, asthma, heart disease and other chronic medical conditions. Along those same lines, we're also asking you to stay away from health clinics and medical offices. If your symptoms are severe and you feel you need to seek medical help, please call your doctor's office before going in. Severe symptoms include: fever of 102.5 or higher, or a lower fever that lasts more than three days; severe cough or chest pain; nausea and vomiting; severe headache.

Get flu shots. We recommend getting the vaccine for the H1N1 flu.

***H1N1 vaccine information -**

The Campus Health Service has received additional doses of H1N1 vaccine and is expanding availability to all those UA students and staff who are:

- U of A students or staff members age 24 or younger
- U of A students or staff members age 25 years and older with a high-risk medical condition (e.g. asthma, diabetes, heart disease, immune suppression, etc.)

- People with physical disabilities
- Pregnant women
- U of A students or staff members who live with or care for children younger than 6 months of age
- U of A students or staff members who are health care personnel and health professions students (medical students, nursing students, etc.), as well as emergency response support personnel.

The next H1N1 flu shot clinics will be held on:

Wednesday, November 18th

**Time and location: UA Mall near the Student Union from 10am-2pm
PAS Building (north side) from 2:30-6pm**

Thursday, November 19th

Time and location: West side of Old Main from 10:30am-2 pm

Monday, November 23rd

Time and location: Kiewit Auditorium – AZ Cancer Center from 10am-1pm

We will communicate the dates, times and locations of additional campus H1N1 flu shot clinics once the details are finalized. As we receive more of the H1N1 vaccine, we will expand the availability of the shots to the entire campus community.

If you would like to receive the vaccine and cannot attend the clinics offered outside of Campus Health, come to the Campus Health Service between the hours of 8am-12noon and 1pm-4:00pm Monday, Tuesday, Thursday or Friday –or- from 9am-12noon and 1pm-4:00pm on Wednesdays. Enter through the Urgent Care Clinic doors on the main floor of the Highland Commons Building and proceed directly to the Immunization Clinic. There is no need to check in at the front desk.

There is no charge for an H1N1 flu vaccine received through the Campus Health Service.

The H1N1 flu vaccine is produced in the same way as seasonal flu vaccines. The shots are proving to be just as safe. They will not provide protection against seasonal flu, or against flu-like illnesses that can be caused by other viruses.

To protect against seasonal flu, you'll need to get a seasonal flu shot. Seasonal flu vaccine is currently only available locally through Mollen Clinics. To see their flu shot clinic schedule, go to <http://mollen.com/>. There is a charge associated with the seasonal flu vaccine.
